Nishkarsh Enterprise Information Management
Data Assets Catalog v1.1.0

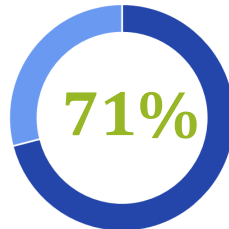

Summarized Product Datasheet

Nishkarsh⁴ EIM Data Assets Catalog v1.1.0

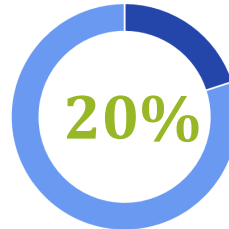

Context | Discover | Share

of CEOs do not trust their data¹

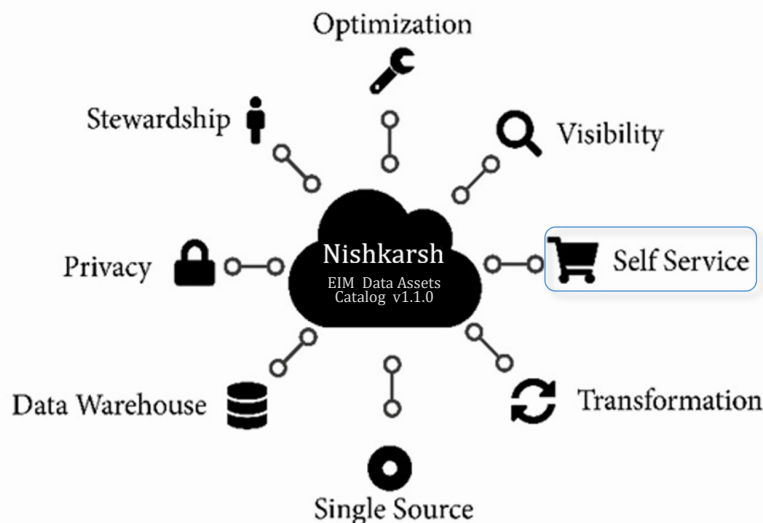

Worry about reputational risk²

Time spent looking for data³

To be successful in a dynamic world of business, organizations need constant visibility of data for decision making and control over its IT systems. Discovery and use of data in a timely manner for decision making is a major challenge faced by many organizations. Organizations need OnDemand capability to unlock and distribute data. The ability to democratize data within organizations at all levels provides a valuable competitive advantage. Access to data and making it available in self-service manner requires building data context, lineages into data and dictionaries to understand data elements.

The Nishkarsh Enterprise Information Management (EIM) Data Assets Catalog tool offers a simple GUI driven interface to its customers which aids in classifying and managing their data assets. The tool focuses on creating a standards-based hierarchical classification for your metadata, which then allows you to create a line of sight into your data assets. This lineage can then be leveraged through tool to facilitate self-service and select sections of data that you need for decision making. Additionally, the tool also provides features to import/export your current

Features:

- Classification of Data
- Mapping of Data Assets
- Data Self-Service
- Data Dictionary
- Scalable Deployments
- Flexible API
- Permissions Management
- Reporting
- Search
